

# Fresno-Madera Counties

## CURRENT SETTING

The Counties of Fresno and Madera define the Fresno Metropolitan Statistical Area. As of January 1, 2000, the region had a population of 922,100 residents, with nearly half (46%) living in the city of Fresno. In May 2000, wage and salary employment totaled 361,300 workers, of which 67,700 or 19 percent were in the farm sector. The creation of jobs advanced 2.0 percent in 1999, compared to 2.8 percent for the state of California.

## FORECAST SUMMARY

- Wage and salary employment is forecast to grow by an average annual rate of 1.8 percent from 2000 through 2020. Most of this increase is expected to be in the services, government, and trade sectors.
- As recently as 1997, farm employment was the leading wage and salary job sector in the MSA. By 1999 it was fourth, slightly behind government, trade, and a burgeoning services sector. Although agriculture is forecast to add nearly 12,200 wage and salary jobs between 1999 and 2020, its share of total regional employment will diminish substantially.
- Real per capita personal income, though greatly lagging the California average throughout the forecast, is expected to grow from an estimated \$20,035 in 1999 to \$22,358 in 2020. This growth in inflation-adjusted personal income per person averages just 0.5 percent per year, barely more than one-fourth the annual pace at which real per capita income is forecast to grow for California.
- Real taxable retail sales are forecast to increase from an estimated \$5.9 billion in 1999 to \$9.2 billion (1999 dollars) in 2020. This growth in inflation-adjusted retail sales amounts to an average annual increase of 2.2 percent, and is due primarily to anticipated increases in the resident population.
- Over the forecast horizon, average annual net migration is forecast at 8,200 persons. The average number of persons per household is forecast to increase from 3.1 in 1999 to 3.6 in 2020, as additions to the housing stock are not expected to keep pace with population growth.

## EMPLOYMENT

During 1999, the region created 9,042 new non-farm wage and salary jobs. This year job growth in the non-farm sector is on a pace to create over 10,000 new jobs. After 2000, total farm and non-farm job creation is forecast to slow, averaging 6,100 new jobs per year between 2001 and 2010. The principal sector of growth is services, followed by retail and wholesale trade. More than 16,000 new jobs will be created in the services sector, and 14,000 new trade jobs by 2010. Employment growth in services is forecast to accelerate during the 2010—2020 period. An aging baby boomer population together with a growing school age population will place greater demands on healthcare and education services.

Farm employment is expected to increase from an average of 68,200 workers in 1999 to 78,000 year-round workers in 2020. Grape production remains prolific in the region but employment gains are likely to be modest because labor saving technologies will characterize California farming over the longer term forecast.

Public sector jobs grow by 12,800 over the next 10 years. That pace accelerates in the out years as the school age population grows increases sharply.

## INCOME

Personal income grew 5.7 percent in 1999, and per capita income rose 4.4 percent. Adjusted for inflation, per capita income improved 2.0 percent in 1999. Personal income is forecast to rise an average 5.0 percent per year between 2001 and 2010, principally from the growth of the population.

The wealth position of the population is expected to improve marginally in the future, and it will significantly lag the average wealth position for all persons in the state of

California. Inflation adjusted per capita income is expected to grow just 0.6 percent per year over the forecast.

An average compound rate of population growth of 1.9 percent over the next 10 years translates into faster rates of growth in total regional consumption. Real retail sales are forecast to rise 2.2 percent per year between 2000 and 2010, and 1.8 percent per year between 2010 and 2020.

## HOUSING AND DEMOGRAPHICS

Net in-migrating population is forecast to increase slowly over the next 10 years. The average level of net in-migration averages 5,300 persons per year until 2010. In later years, net migration accelerates to accommodate the demand for jobs and the relatively affordable housing in the

region. Population growth rises slightly from 1.7 percent in 1999 to 2.0 percent by 2001 and 1.8 percent in 2010. Both net migration and the natural increase are responsible for slightly increasing population in the Fresno MSA over the forecast horizon.

The rate of new home building is forecast to average approximately 4,000 units per year between 2000 and 2010, and 4,550 units per year after 2010. Home prices rise in the Fresno and Madera County areas over the forecast, but at very modest rates of increase. Household densities are forecast to rise from 3.14 persons per home in 2000 to 3.6 persons per home in 2020.

Registered vehicles are forecast to grow by an average rate of 1.1 percent a year, from 632,000 vehicles in 1999 to 796,000 in 2020. Over the same time period, the average number of persons per vehicle is expected to increase from 1.44 in 1999 to 1.71 in 2020, coincident with the anticipated growth in household sizes.
